Art Unit: 1634

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 13-19, 21-28 and 32-37, drawn to methods of diagnosing a disease, classified in Class 435, subclass 6.

II. Claims 29-31, drawn to non-human transgenic animals comprising a gene encoding a modified human G protein β_3 subunit, classified in Class 800, subclass 8.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are not disclosed as capable of use together because the transgenic animals of invention II are not required to practice the diagnostic method of invention I. Furthermore, the transgenic animals of invention II may be used in different methods, such as methods for identifying drugs for the treatment of hypertension.

Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I and II require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
